Release Notes
Snitcher Asset Management
SAM 2.5

Abstract:

This document lists the major features of SAM 2.5.

Snitcher Asset Management	Date	2007-11-05	Ref	ks011p03a06v1_release_n	Page	2(6)

SAM User Guide PPC	KS011p03b03env2	Not changed
Target Environment Specification	KS011p03a03env2	Not changed

2 VERSIONS

2.1 PC

The version of SAM is 2.5.0

2.2 Database

The version of SAM database is 2.5.0

2.3 Tracy Connection

The version of SAM-Tracy is 2.5.0

3 TEST

3.1 Specification

This is a minor release, and full testing has been performed according to the specification in the test report HF047g09v01.

Each new function, TR and CR has been tested according to the nature of their function.

3.2 Deviation

None

4 TROUBLE REPORTS

There are 3 Trouble Reports fixed in this release:

Prevas TR Number
TR48
TR49
TR50

4.1 TR 48 SAM searching in wrong field

In SAM 2.4 when an Advanced search for 'Software License' where performed, results where from the 'Support Agreement' field instead. It was impossible to search for values in the 'Software License' field.

This error is corrected and the search is being made on the correct field 'Software License'.

4.2 TR 49 Error with Owner Transfer due to Retailer

In SAM 2.4 when transferring an individual with a connected Retailer to another owner in another Region an error occurred in SAM 2.4 due to a database constraint.

The constraint causing this problem is removed and the Region will now only work as a filter when setting Retailer.

4.3 TR 50 Problem to delete site with individuals in status "REMOVED FROM ETE"

In SAM 2.4 when deleting sites that contained individuals that were in the status VOID or REMOVED FROM ETE it was hard to understand why the message "It is not possible to delete this Site while there are assets registered to it" appeared. A normal search for assets showed no result, because they only show up in Advanced search.

Now there is a message box giving a hint that there may exist individuals in the status VOID or REMOVED FROM ETE and to use Advanced search to find them.

5 CHANGE REQUESTS

There are 4 Change Requests included in this release:

Prevas CR Number	ETE CR Number
CR68	CR465
CR69	CR461
CR70	CR457
CR72	N/A

5.1 CR 68 Ability to change functional descriptions in SAM

BETE is doing a lot of work in Globalization to enable them to standardize and benchmark their service between different global Test Organizations. Part of this work involves them to have a standard naming convention implemented in their booking system so that in

Snitcher Asset Management	Date	2007-11-05	Ref	ks011p03a06v1_release_n	Page	5(6)

whatever location the user is, the equipment is named consistently and can be searched for the same way.

One impact of this is that they want to be able to re-use the 'Functional Designation' drop-downs in SAM in the booking system, to provide more information as to the hardware platform/equipment type and hardware level.

In SAM 2.5 it is possible to change the Functional Designation in the Edit Description dialog. The individuals with the Functional Designation connected will be updated as well. Only non-Ericsson assets can have their Functional Designation changed.

5.2 CR 69 SAM-BS Interaction

The SAM application does not keep the private key introduced by the SAM-BS interaction IP when changing the customer id.

SAM-BS interaction introduced a private key, a number, that is associated with a customer. As a fictive example customer "ABC" is associated with the private key "42". If "ABC" is changed to "ABD" the private key "42" shall be kept since the number "42" is used from the booking system. Instead SAM adds a new row "ABD" which gets number "43", then removes the old "ABC" row without copying the "42".

In SAM 2.5 when moving or changing name on a Test Organization the unique number is unchanged.

5.3 CR 70 Addition of new status "DELIVERY PENDING" in SAM

Sometimes there is a need for assigning BAMS numbers to equipment before it arrives on site. These will be scanned into SAM. They cannot be marked as active as they will not be on site at the time of scanning. Add 'Delivery pending' to the status drop down window in Snitcher.

In SAM 2.5 there is a new status DELIVERY PENDING. The status DELIVERY PENDING can only be set from status ACTIVE and an individual in status DELIVERY PENDING can only be set to status ACTIVE. All transactions in the PocketPC will put individuals in status ACTIVE if they are in status DELIVERY PENDING when stored (the exception is Show Asset which never updates the asset in SAM).

The status will be inherited down to all children even if the children are not in the scanned section, but not applied to parents. The individuals with status DELIVERY PENDING will most likely not be in a structure in SAM when scanned the first time.

In inventory the individuals marked and selected "move to..." or "move to inventoried site..." will automatically be set to status ACTIVE if they are in DELIVERY PENDING. If not marked or if they are missing in the inventory they will not be automatically updated.

5.4 CR 72 Database improvements

There are a number of improvements needed in the SAM database to facilitate the new functionality in BAMS Booking System R5. If the changes described in this CR are not implemented, the performance of BAMS R5 will suffer.

The changes in WIH errand number ST0000005551201 is implemented.

6 PREVIOUS RELEASE

The release before this was version 2.4.

7 COMPATIBILITY

The SAM 2.5 application is compatible with the following PPC versions:

PPC Version	Comment
5.1	All functions on the PPC can be used.
5.2	All functions on the PPC can be used, including the Inventory function
5.3	All functions on the PPC can be used.
