## **Production Logistics, a Center of Excellence at Prevas**

**Prevas has been developing and supplying systems for production logistics to world-leading companies for two decades. For this reason, Prevas has decided to introduce a Center of Excellence for Production Logistics.**

**Nordic industry is faced with major challenges. Increased competition forces companies to look for new and smarter solutions; the solutions might consist, for example, of productivity, optimization, improved quality and delivery reliability, or just being at the right place at the right time.**

Prevas' new Center of Excellence is based in Gothenburg. Prevas' specialists associated with the Center of Excellence have developed production logistics systems for the industry for over 30 years. Combining business and industry know-how with innovative system platforms enables a long-term and attractive offering of both expert services and high-efficiency systems for production logistics.

Production logistics has grown in importance in the industry – at the same time that demands on shorter delivery times and quality assurance have increased, as have demands on more flexible production and reduced tied-up capital.

"We have built up several Centers of Excellence as a means to help our customer compete on a global market. We offer specialist project teams there with specific domain expertise and technical platforms for profitable, turnkey solutions," says Christer Ramebäck, Business Area Manager at Prevas.

Processes and flows are important key concepts in production logistics. Production logistics is a matter of steering, monitoring and optimizing where a product is in production, as well as where and how the product moves through the subsequent steps of the production chain. Amongst other things, the challenges consist of ensuring that flows, stockkeeping and moves are designed to be as efficient as possible.

"Getting to develop Prevas' already powerful offering of systems, platforms and services within production logistics is incredibly exciting. Our broad, in-depth expertise at the company allows us to help our customers successfully take on future challenges to improve their competitiveness," says Håkan Serner, who heads up the Production Logistics Center of Excellence.
