

Innovation for Growth

Press release, August 20, 2015

Prevas signs development agreement with global Life Science company

Life Science industry is constantly searching for more efficient ways and solutions to support our expectations as humans, which is to live longer. Innovative solutions are required and, at the same time, usability, mobile communications, big system solutions and future compatibility are becoming increasingly more important.

For a new and exciting product within the Life Science area, Prevas has been selected as development partner. Prevas has therefore signed a development agreement to cover development of a new state of the art product for a global Medtech company. The agreement includes development of electronics (hardware, software and project management) for the new product.

“This contract has a significant value for Prevas and by using new emerging technologies, our partner will end up having a new product that will secure their market position and set new important standards in the market for medical devices” says Henrik Møller, President, Prevas A/S in Denmark.

Prevas is an ISO13485 certified design house where the tough technical and regulatory requirements, set by customers, has made Prevas a preferred development partner to the Life Science industry.

“We are very proud that Prevas has been chosen as partner in this development project. This shows again that Prevas is a competent development partner for the very demanding Life Science industry. Life Science is one of our focus areas where we make a difference given our size, competences and processes”, continues Henrik Møller.

The new product is planned to be released on the market in 2016.
